Proven Technology – Reliable Operation Homa ASC Cutter System For Non-Clog Pumps

HOMA Pump Technology has extended our product range of submersible wastewater pumps with Non-Clog Cutter Systems.

HOMA offers a sewage cutter option available on the non-clog pumps from 3” through 6” discharge size. This option allows the standard non-clog pumps to process high volumes of rags and other material which will routinely plug a standard non-clog pump.

The impeller is fitted with two hardened rotational cutter blades that work in close proximity to the stationary hardened cutter blade mounted on the adjustable suction plate. All other pump components are standard design so this option can be easily added to existing pumps where needed
